## IPS e.max<sup>®</sup>

### Lithium Disilicate Glass-Ceramic

Featuring lifelike esthetics and high flexural strength, Ivoclar Vivadent's IPS e.max<sup>®</sup> produces restorations with excellent fit, form, and function. The lithium disilicate glass-ceramic ingots are available in four levels of translucency and two sizes, providing solutions for a wide range of indications.

IPS e.max<sup>®</sup> restorations are ideally suited for the fabrication of monolithic single-tooth restorations. This innovative ceramic provides highly esthetic results and the strength is 2.5-3 times higher when compared to other glass-ceramics.

*We proudly offer a  
**5-Year Warranty**  
against fractures on  
all fixed restorations.*

## One System for Every Indication

### Advantages:

- Durable restorations due to high strength
- Wide range of indications from thin veneers to three-unit anterior or posterior bridges
- Minimally invasive preparation for treatment that is gentle to the tooth structure
- Adhesive, self adhesive and conventional cementation, depending on the indication
- Lifelike esthetics, irrespective of the shade of the preparation

All Ceramic.  
All You Need.
